

**15. UTILITY EXTENSION
HIGH STREET UNITED METHODIST CHURCH**

As you may be aware, High Street United Methodist Church is continuing to plan construction of new facilities on property it recently acquired on the south side of Camp Parkway, diagonally across from Riverdale Elementary School.

As you know from discussions last August, public water and sewer is paramount to their project. In a letter to the church last summer, after granting them authority to connect to the waterline along Camp Parkway, I indicated that we were also planning the sewer extension to Riverdale Elementary, but that the final alignment at that time had not been determined. My idea was that the Church would tap into the last manhole on the north side of Camp Parkway, in front of the school, bore beneath Camp Parkway at its expense and then extend the sewer line along the south side of the highway, eastward to their property.

After further evaluation, I now believe it makes more sense to extend the gravity sewer farther along the north side of Camp Parkway than presently planned, beneath the Boulevard serving the school and then allow the Church to bore beneath the highway directly in front of their property.

Because the main beneficiary of an extension along the north side of Camp Parkway is Hampton Roads Development, I've recently contacted Mr. Fiscella to see if he may be interested in a cost share for the extension. In our telephone conversation, he indicated that he'd be interested in meeting with me once our plan was further developed and we had some preliminary cost estimates.

At this writing, there's no particular action that I'm seeking – but before discussing the extension seriously and meeting with Mr. Fiscella, I wanted your blessing.
